

Fish Art in MS Word

Using the Curve Line tool in Auto Shapes we are going to create a fish. First find the Curve tool under Auto Shapes. You can pull this off so that you have easy access to it.

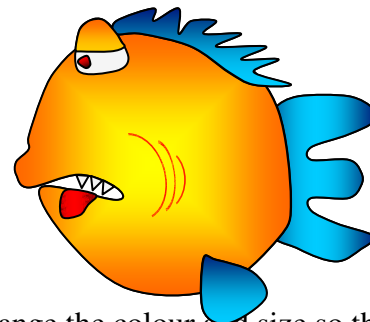

Use the Curve tool to create the following:

- Body (not including the tail)
- Tail
- Dorsal Fin
- Pectoral Fin
- Eye

Once you have made all the parts colour each one in using colours or fill effects. You can add teeth, gills, etc. Group the fish together.

Once you have created one fish copy and paste it. Change the colour and size so that you get several different looking fish. Add a background from Clipart Online.
